

Learn About Wireless Radiation

- ❧ Mobile and wi-fi devices carry our signals back and forth using two-way microwave radiation, but have never been tested for biological safety.
- ❧ Thousands of independently funded scientific studies from around the world now show wireless radiation causes extensive harm to people and the environment.
- ❧ Long-term effects include DNA damage, cancers, infertility, Alzheimer's, autism, ADD/ADHD, chronic fatigue, learning disabilities, anxiety, depression, behavioral issues and more.
- ❧ Short-term effects include insomnia, headaches, nosebleeds, nausea, dizziness, ringing in the ears, skin flushing/heating/tingling/rashes, irregular heartbeats, anger, pain and cognitive impairment.
- ❧ Adults, children, pets, and pollinators are suffering from cell towers, small cell antennas, utility "smart" meters and our own cell phones, routers, tablets, laptops, wearables, baby monitors, gaming systems, appliances and other wireless devices.
- ❧ Out-dated government guidelines do not reflect current science, so manufacturers are still allowed to sell products and install wireless infrastructure that emits toxic levels of microwave radiation.
- ❧ The message is not "no technology" but rather "safe technology" and we know how to get there. Please join us at Massachusetts for Safe Technology to learn more, including simple steps you can take today to use technology more safely. See the reverse side for actions many are taking to inform and protect our communities.
